1 DIBELS® Oral Reading Fluency Directions

Make sure you have reviewed the directions in the *DIBELS Assessment Manual* and have them available. Say these specific directions to the student:

- ▶ I would like you to read a story to me. Please do your best reading. If you do not know a word, I will read the word for you. Keep reading until I say "stop." Be ready to tell me all about the story when you finish. (Place the passage in front of the student.)
- ▶ Begin testing. Put your finger under the first word (point to the first word of the passage). Ready, begin.

Timing	1 minute. Start your stopwatch after the student says the first word of the passage. Place a bracket (]) and say Stop after 1 minute.
Wait	If no response in 3 seconds, say the word and mark it as incorrect.
Discontinue	If no words are read correctly in the first line, say Stop , record a score of 0, and do not administer Retell.
	If fewer than 10 words are read correctly on passage #1, do not administer Retell or passages #2 and #3.
	If fewer than 40 words are read correctly on any passage, use professional judgment whether to administer Retell for that passage.
Reminders	If the student stops (not a hesitation on a specific item), say Keep going . (Repeat as often as needed.)
	If the student loses his/her place, point. (Repeat as often as needed.)

The Land Bridge

During the last ice age, the world looked much different than it does today. Nearly all the land was covered with huge sheets of ice or glaciers. 27 Most of the world's water was trapped in these glaciers, and the water 27 40 level of the seas was low. A vast amount of land was above the water. 55 The narrow waterway between Asia and North America, the Bering 65 55 Strait, was mostly exposed land at that time. The land formed a narrow 78 bridge that connected Asia with North America. This land bridge was 89 cold and flat, and was covered by grass and shrubs. Before the formation 102 of the land bridge, early people who wanted to travel to North America 115 had to go by boat. Very few people actually made the voyage over the 129 115 water. Many more people traveled to North America when they were able 141 to walk across the land bridge. 141 147 After crossing the land bridge, the earliest people found themselves 147 in an unfamiliar land where there were no other inhabitants. These first 169 157 people had to search for food and water. If they were to survive, they 169 183 also had to locate materials that they could use to fashion tools. 183 195 There are no written accounts of these early people. Scientists who 206 195 want to know how they lived must seek clues in the things they left 220 behind. Today, it is believed that the movement to the new world took 233 220 place over a long period of time. The earliest people most likely came to 247 the new world as they followed migrating animals. 247 255 After many thousands of years, the climate began to change, causing 266 255

in the sunlight, and his yellow eyes sparkled like precious jewels. Crow 23 was so strong that he frequently flew for hundreds of miles without 35 stopping. 36 One day, Crow was flying along when he started to feel thirsty. He 49 dropped to a low altitude to search for something refreshing to drink. 61 Suddenly, he spied a pitcher of water sitting on a barnyard fence. The 74 fence was in the shade, shielded from the sun by a towering oak tree. 88 "That water should make a nice, cool drink," thought Crow. 98 Crow landed on the fence and examined the tempting pitcher. He 109 saw that it was about half full of water. However, no matter how hard he 124 tried, he could not reach the water with his beak. Crow was frustrated, 137 but he wasn't ready to give up. He knew if he considered the situation 151 carefully he would be able to find a solution. 160 Crow considered overturning the pitcher, hoping that the water 169 would spill so he could drink it. He rejected that idea, fearing that all the 184 water would flow away before he could get any. "It would be a shame 198 to waste this treat," Crow thought. He looked all around for some more 211 ideas, and saw some shiny pebbles lying on the ground. Looking at them, 224 Crow finally had the inspiration he had been looking for. 234 Crow picked up the pebbles one by one with his beak and dropped 247

Once there lived a sleek, black crow. Crow's shiny feathers glistened

An Amazing City

0	Every day, tourists flock to see special places around the world.	11
11	One place that is special because it is so old is the site of the ruins of an	29
29	ancient city in Mexico.	33
33	The Mayan people built this ancient city more than one thousand	44
44	years ago. The site covers four square miles. The structures that were	56
56	left behind show that this community was once thriving. Many scientists	67
67	have come to this location and tried to solve the mysteries of the city.	81
81	They have excavated the ruins and carefully restored as much as they	93
93	could.	94
94	One question that is still unanswered is why there are two styles of	107
107	architecture in the city. Some buildings look like ones found in other	119
119	Mayan cities. However, other buildings, such as the pyramid, temple,	129
129	and ball court, have a different design. They look like structures built by	142
142	a group of people called the Toltecs. One theory is that the Toltecs took	156
156	over the city. Another theory is that the Maya learned about the Toltecs'	169
169	style by trading with them. If the Maya liked the buildings they saw, they	183
183	might have tried to imitate them.	189
189	The pyramid at this site has been completely restored on two of its	202
202	four sides. It towers over the other buildings. Visitors climb ninety-one	214
214	steps to reach the top platform for a grand view of this amazing place.	228
228	The total number of steps on all sides of the building adds up to three	243

How Kangaroo Got Her Pouch

On a lovely sunny day, a mother and her youngest son were taking 13 a relaxing walk through the outback. Suddenly, Mother Kangaroo lost 13 23 sight of her offspring, and she started searching for him. She peered 35 under some bushes and in the emerald grass. 43 35 Joey suddenly bounded up and shouted that he was right behind 43 54 her. Mother was startled and leaped into the air. The young kangaroo 66 apologized for surprising her. 70 66 The two ambled along on their journey, pausing after a while to 70 82 munch on some delicious grass. When Mother glanced up, she was 93 alarmed to see that Joey had vanished again. She started searching, but, 105 instead of finding her son, she discovered her old friend Wombat. They 105 117 greeted each other, and Mother said, "My rascal son has wandered off 117 129 again. Did you happen to see him?" 136 129 Wombat said that he was very sorry to see her distressed, but he had 136 150 not seen the youngster. He did, however, have a suggestion she could 150 162 consider. "I am extremely thirsty," he said, "so why don't you help me 175 162 search for water, and then when I'm refreshed we can search together 175 187 for your meandering son." Mother agreed to the arrangement, and then 187 198 shielded her eyes from the sun and peered into the distance. She was 211 198 much taller than Wombat, so she could see over the grass. Before long, 211 224 Mother saw a pool of sparkling water, so she had Wombat grab her tail, 224 238

Recycling Tires

If you look around, you will see tires everywhere. There are tires 12 on automobiles and trucks, and there are tires on motorcycles and 23 airplanes. Eventually, all these tires will be thrown away, creating a huge 35 mountain of tires. You might be surprised to learn that old tires are one 49 of the biggest and most challenging sources of trash. The piles of old tires frequently become home to mosquitoes and other insects that carry 73 disease. Discarded tires are a dangerous fire hazard. The pollution caused by tire fires is very harmful to the environment. Because old tires don't 97 decay, they are a problem that will be around for a long, long time. 97 111 Those who care about the environment are worried about the large 122 111 volume of old tires. They are researching ways to recycle and reuse 134 the rubber in tires. That way they can keep old tires out of landfills and 134 protect the environment. One way to recycle the rubber is to heat the tires 163 149 in a special oven. The oven does not allow any oxygen in and allows few 178 163 pollutants out. The recycled rubber can then be used for new products 190 like shoes and even sweaters. Recycling the rubber also produces oil that 202 190 people can use as fuel. Fuel from tires can produce as much energy as 202 216 coal or oil and is often used to power major factories. 227 Not all tires need to be recycled, many can be reused. Scrap tires can 241 227 be placed around bridges to protect them from flood damage. Some tires are cut into pieces and fashioned into sandals or used in roads. Shredded 266

Page 28 © 2011 All rights reserved © 2011 All rights reserved Page 9

Recycling Tires (continued)

266	tires can be used to make walls that reduce the noise from highways for	28
280	people who live nearby. Shredded tires can even make railroad ties to	29
292	reduce our need for trees.	29
297	I hope you will see tires in a whole new light. The tire on your	31
312	automobile might eventually be used for the shoes on your feet or the	32
325	asphalt on the road you walk on to get to school.	33

Build a Thermometer

If you walk outside on a summer day, you will usually feel warm. 13 However, if you walk outside in the wintertime, you will usually feel 25 much colder. How could you find out the exact temperature? You could use a thermometer, which is a tool that measures temperature. 47 To better understand how a thermometer works, you can construct 57 47 your own. Begin by filling a small soda bottle with cold water. Make sure 71 the bottle is filled to the brim. Next, add four drops of food coloring to 86 the water to make it more visible. 93 Make a ball of modeling clay that is large enough to form a stopper 93 107 for the bottle. Flatten the clay to create a long thin ribbon, and wrap it 122 around the middle of a straw. 128 Position the straw in the bottle so the clay forms a stopper at the top 128 of the bottle with the straw through the middle of the clay. Carefully seal the bottle with the clay without pinching to ensure the straw remains 157 169 completely open. To prevent water from escaping, confirm that there are 180 no holes or cracks in the clay. You will notice that half of the straw is 196 submerged in the water, while the other half is outside the bottle. Gently 209 force the clay plug into the top of the bottle until the level of the water 225 moves up into the straw above the bottle. 233 Now it is time to utilize your bottle thermometer to measure 233 244 temperature. Place it in a larger bottle that is filled with hot water. Every 258 two minutes for the next ten minutes, take a reading by marking the 271

3 DIBELS® Oral Reading Fluency Directions

Make sure you have reviewed the directions in the *DIBELS Assessment Manual* and have them available. Say these specific directions to the student:

- ▶ I would like you to read a story to me. Please do your best reading. If you do not know a word, I will read the word for you. Keep reading until I say "stop." Be ready to tell me all about the story when you finish. (Place the passage in front of the student.)
- ▶ Begin testing. Put your finger under the first word (point to the first word of the passage).
 Ready, begin.

Timing	1 minute. Start your stopwatch after the student says the first word of the passage. Place a bracket (]) and say Stop after 1 minute.
Wait	If no response in 3 seconds, say the word and mark it as incorrect.
Discontinue	If no words are read correctly in the first line, say Stop , record a score of 0, and do not administer Retell.
	If fewer than 10 words are read correctly on passage #1, do not administer Retell or passages #2 and #3.
	If fewer than 40 words are read correctly on any passage, use professional judgment whether to administer Retell for that passage.
Reminders	If the student stops (not a hesitation on a specific item), say Keep going . (Repeat as often as needed.)
	If the student loses his/her place, point. (Repeat as often as needed.)

A Genius at Work

0	The boy was seven years old and starting school for the first time.	13
13	He was the only son of a poor family who lived in what is now part of	30
30	Germany. To look at this child, he seemed like an ordinary boy; however,	43
43	he had an amazing talent in math and science. In fact, he would go on to	59
59	become one of the most important mathematicians in the world.	69
69	The boy's name was Carl Gauss. He reportedly was able to calculate	81
81	in his head by the time he was three years old. The youngster was so	96
96	good in math that he corrected mistakes that his father made when	108
108	computing the family budget.	112
112	Carl also showed his superior abilities in math at school. One time,	124
124	his teacher asked the students to add the list of numbers from one to	138
138	one hundred. The teacher thought that this would take the students a	150
150	long time. To his surprise, young Carl arrived at the correct answer	162
162	almost instantly. The boy explained that he had found a clever way to	175
175	pair the numbers that allowed him to turn the problem into a simple	188
188	multiplication calculation. He could use this method to add a long string	200
200	of numbers very quickly.	204
204	Carl's mother and father had different views about their son's	214
214	education. His father was a mason who built things with brick and stone.	227
227	Carl's father wanted Carl to become a mason, too. The boy's mother,	239
239	though, strongly supported Carl's schooling in math and science because	249
249	she realized that he had a special talent in these areas. Carl continued	262

2 DIBELS® Oral Reading Fluency Grade 5/Benchmark 2

General ORF Response Patterns for all three passages:

· · · · · · · · · · · · · · · · · · ·
Reads with appropriate phrasing, intonation/expression, and observed punctuation
Self-corrects/monitors meaning
Shows automaticity on re-read words
Uses effective decoding strategies
Errors preserve passage meaning
Errors violate passage meaning
Frequently omits words or letters
Frequently adds words or letters
Frequent errors on sight words (e.g., I, was, and, the, said, etc.)
Frequent errors on phonetically regular words (e.g., cat, milk, etc.)
Frequent errors on phonetically irregular words
Skips lines
Other
General Retell Response Patterns for all three passages:
Summarizes
Repeats the same detail
Retells the passage verbatim
"Speed reads" the passage (i.e., reads quickly with no phrasing or intonation) and has limited retell relative to number of words read
Talks about own life related to passage
Other

Retell: The Chunnel

Now tell me as much as you can about the story you just read. Ready, begin.

Timing	1-minute maximum. Start your stopwatch after telling the student to begin. Say Stop after 1 minute.
Wait/	If the student stops or hesitates for 3 seconds, select <i>one</i> of the following (allowed one time):
Reminder	—If the student has not said anything at all, provides a very limited response, or provides an off-track response, say Tell me as much as you can about the story.
	—Otherwise, ask Can you tell me anything more about the story?
Discontinue	After the first reminder, if the student does not say anything or gets off track for 5 seconds, say <i>Thank you</i> and discontinue the task.

The body of water between France and Britain is called the English 12 Channel. If you want to cross from one side of the English Channel 25 to the other, there is no bridge you can cross. Instead, you can take a 40 train through an underwater tunnel. This channel tunnel is known as the 52 Chunnel. 53 The Chunnel consists of three tunnels that allow trains to run under 65 the water from one side of the channel to the other. Trains that carry 79 people and goods use the two outer tunnels. The middle tunnel is smaller 92 than the other two tunnels. It is used for ventilation and to make sure 106 maintenance and emergency vehicles can reach the other tunnels. 115 The Chunnel was dreamed of long before it was finally built. More 127 than two hundred years ago, an engineer first talked about building a 139 tunnel under the English Channel. He believed that people could travel in 151 carriages drawn by horses through the tunnel. The tunnel would have oil lamps since they did not have electric lights back then. He imagined an island in the middle, where people could change to fresh horses. Over the 189 years, many people drew up plans for the tunnel. Although one attempt at 202 digging was made, none of the early plans ever made it to completion. 215 Almost forty years ago, construction work finally began on what 225 would become the Chunnel. The governments of England and France 235 soon became worried about how much money the tunnels would cost, 246

A Special Song

0	The boy searched through the pieces of bamboo that his mother had	12
12	cut. He ran his hands over numerous pieces to know what each would	25
25	feel like when he held it. He narrowed down his choice to three pieces.	39
39	He looked down the hollow centers of those pieces. Finally, he picked	51
51	the one that he thought would make the best flute.	61
61	As Zachary presented the piece of bamboo to his mother, she	72
72	admired his selection. She proceeded to turn the bamboo into a flute with	85
85	six perfect holes in a straight line and a hole for the mouth. She provided	100
100	some special oil, which her son gently applied to his fabulous new	112
112	instrument.	113
113	Zachary anticipated making lovely melodies with his flute. He	122
122	pressed the instrument firmly against his lips and blew into it with a deep	136
136	breath. He made a sharp squealing noise, which caused him to giggle.	148
148	Mama smiled and instructed him to blow with a gentle, even breath. She	161
161	showed him how to cover the holes with his fingertips. Mama explained	173
173	that he could play various notes by doing this. Zachary experimented and	185
185	was thrilled to hear how the different notes sounded.	194
194	Every afternoon Zachary practiced playing his flute. He was	203
203	delighted to make up little songs, but he wanted to do something special	216
216	to express his appreciation to his mother for making this musical	227
227	instrument. He remembered her favorite song and figured out for himself	238

Page 20 © 2011 All rights reserved © 2011 All rights reserved Page 17

A Special Song (continued)

238	how to play it. Then, one day, while Mama was washing the dinner	251
251	dishes, he asked if he could perform something special. She turned off	263
263	the faucet and stood by the sink as Zachary grasped his flute and began to	278
278	play. She was captivated by her favorite song, which was more beautiful	290
290	than she had ever heard it before. When the music had concluded, Mama	303
303	walked over to her son and gave him an enormous hug.	314
